

DTD Education Research Alignment

1. Locked Session Decision

DTD Education is a **7-module education curriculum**.

The 7 modules are the actual education product.

The governance does not replace the modules.

The governance controls how each module must be researched, written, and shown on the website.

Research must support the 7-module curriculum and the DTD Education governance.

2. Locked 7-Module Curriculum

Module 1: The Blueprint

Safe home, rest zone, first vet/cost baseline.

Module 2: The Transition Phase

Early puppy/new dog problems: toileting, biting, owner overwhelm.

Module 3: The Empathy Engine

Reading dog signals, stress signs, illness red flags.

Module 4: The Social Filter

Fear, socialisation, handling, safe exposure.

Module 5: The Sync Mechanics

Reward timing, calm routines, household consistency.

Module 6: The Urban Flow & The Shield

Public stress, street hazards, window barking, alone-time calm.

Module 7: The Freedom Framework

Expanding boundaries, room access, signal bell, family rules.

3. Locked Governance Wall

Every research item must align with at least one of these governance objectives:

1. Reduce new-owner confusion.
2. Improve owner judgment.
3. Prevent accidental escalation.
4. Build calm routines.
5. Identify when education is not enough.
6. Prepare owners for trainer support.

Research must answer:

What should the new owner notice, avoid, change, do next, escalate, or prepare before trainer support?

Research must not become generic dog-training content.

4. Documents Created in This Session

Document 1: DTD Education — Product Spec

Purpose:

Defines DTD Education as a website product layer, not generic dog training.

Key points:

- for new dog owners
- supports trainer matching
- builds owner readiness
- sells clarity, calm, confidence, better daily decisions
- acts as acquisition hook, trust layer, and bridge into trainer services

Recommended repo file:

```
/docs/education/00-product-spec.md
```

Document 2: DTD Education Lane Governance Document

Purpose:

Main control document for the Education lane.

Key points:

- Education exists before trainer matching
- not a trainer replacement
- not generic blog content
- must support the six governance objectives
- defines content boundaries, safety rules, source standards, escalation rules, and trainer-readiness rules

Recommended repo file:

```
/docs/education/01-education-lane-governance.md
```

Document 3: What Not To Research As Core Content

Purpose:

Strict exclusion document.

Key points:

Do not research as core content:

- tricks
- generic obedience drills
- trainer-level behaviour modification
- aggression treatment plans
- veterinary diagnosis
- medical treatment advice
- breed encyclopaedia content
- product reviews
- long theory lessons
- generic puppy blog articles
- SEO filler

Recommended repo file:

```
/docs/education/02-what-not-to-research-core-content.md
```

Document 4: What To Research and What Should Show on the Website

Purpose:

Defines research areas and what should appear in the final website layer.

Key points:

Research broadly enough to understand the issue.
Show narrowly enough that the owner can act.

Website should show:

- scenario-led lessons
- decision rules
- common mistake callouts
- “Do This Now” actions
- escalation prompts
- trainer-readiness prompts
- capability/journey progress

Recommended repo file:

```
/docs/education/03-what-to-research-and-website-final-state.md
```

Document 5: Revised Seven-Module Outline

Purpose:

Defines the actual curriculum spine.

Key points:

- the course is the 7-module journey
- modules should not become isolated Google-style answers
- each module builds new-owner capability

Recommended repo file:

```
/docs/education/curriculum/01-seven-module-curriculum-outline.md
```

5. Research Must Align Like This

Module 1: The Blueprint

Research only:

- safe home setup
- household hazards
- rest zone setup
- puppy/new dog sleep and decompression
- first vet visit preparation
- realistic first-year cost baseline

Must support:

- build calm routines
- prevent setup mistakes
- identify vet-related red flags

Do not research:

- full product shopping guides
 - best crates
 - best puppy food brands
 - generic puppy checklist articles unless reframed
-

Module 2: The Transition Phase

Research only:

- toileting routines
- puppy biting/mouthing
- chewing
- early adjustment
- puppy blues / owner overwhelm
- supervision and early routine control

Must support:

- reduce confusion
- prevent accidental escalation
- build calm early routines

Do not research:

- generic puppy training tips
 - obedience drills
 - promises to “fix” puppy behaviour fast
-

Module 3: The Empathy Engine

Research only:

- beginner-safe dog body language
- stress signals
- fear signals
- over-arousal signals
- illness red flags that may look behavioural
- when to stop training and seek vet input

Must support:

- improve owner judgment
- reduce confusion
- identify when education is not enough

Do not research:

- dense ethology
 - dominance theory debates
 - technical body-language interpretation beyond beginner level
-

Module 4: The Social Filter

Research only:

- fear handling
- safe socialisation
- exposure versus forcing
- sensitive socialisation period
- handling small dogs respectfully
- safe exposure before full vaccination, using vet-aligned guidance

Must support:

- prevent accidental escalation
- improve owner judgment
- identify when trainer support is needed

Do not research:

- serious fear treatment plans
 - aggression protocols
 - complex desensitisation programmes as self-guided content
-

Module 5: The Sync Mechanics

Research only:

- reward timing
- marker basics
- accidental reinforcement
- calm routines
- family consistency
- simple practice repetition

Must support:

- improve owner judgment

- build calm routines
- prevent confusing mixed signals

Do not research:

- advanced obedience
- competition training
- tricks
- long operant conditioning theory

Module 6: The Urban Flow & The Shield

Research only:

- public overwhelm
- loud noises
- street hazards
- window barking/environment management
- safe walk handling
- alone-time foundations

Must support:

- improve owner judgment
- prevent accidental escalation
- identify when trainer support is needed

Do not research:

- advanced reactivity protocols
- full loose-leash programmes
- severe separation anxiety treatment plans

Module 7: The Freedom Framework

Research only:

- gradual freedom expansion
- supervision rules
- preventing regression
- indoor boundaries
- signal bell basics
- family cue consistency
- trainer-readiness notes when problems repeat

Must support:

- build calm routines
- prevent accidental escalation

- prepare owners for trainer support

Do not research:

- punishment-based correction plans
 - rigid one-size-fits-all rules
 - unsafe tethering advice
-

6. Research Output Template

Every research note should use this format:

Module:
Topic:
Governance objective supported:
Owner situation:
What the owner needs to notice:
Common mistake:
Better decision rule:
What to do next:
When education is not enough:
What to tell a trainer:
Source:
Source type:
Evidence strength:
Website-ready wording:
Internal-only notes:

7. Website Final State

The website should show the 7-module curriculum as the main journey.

Each module should show:

1. Scenario
2. What the owner needs to notice
3. Common mistake
4. Better decision rule
5. What to do now
6. Watch for this
7. When to seek help
8. Trainer-readiness note where relevant

The website should not show:

- raw research notes
- source dumps

- long theory
 - generic dog training articles
 - medical diagnosis
 - trainer-level protocols
 - product rankings
 - breed stereotypes
 - SEO filler
-

8. Final Alignment Rule

Research must serve the 7-module curriculum.

The 7 modules must serve the governance objectives.

The website must show only the distilled owner-facing version.

Final rule:

Research broadly enough to make the curriculum credible.
Show narrowly enough that a new dog owner can act.
